

TideValet

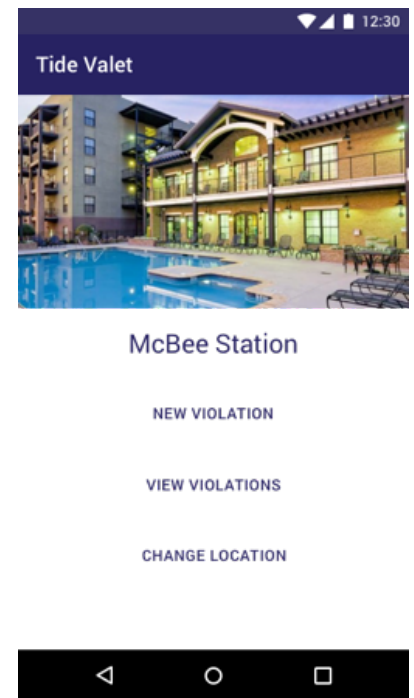

User login screen

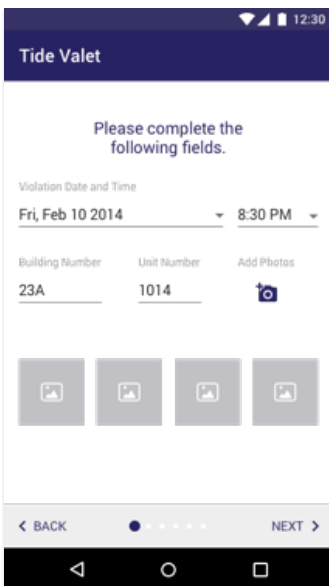

After logging in, the app shows nearby locations or locations assigned to the employee.

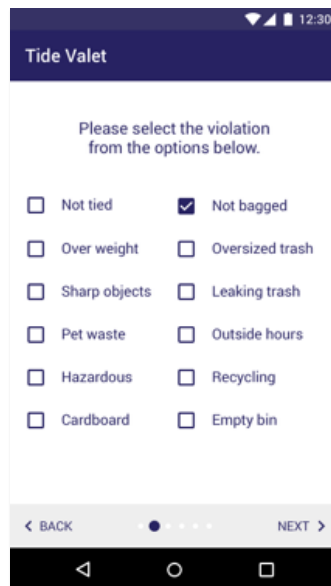

Once a location is chosen, the employee has an option to submit a new violation, view violations or change to a different location.

TideValet

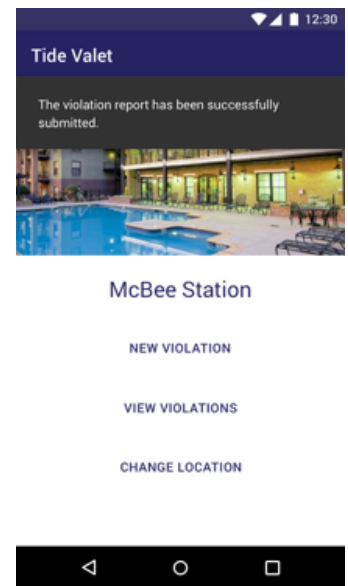

When the user selects new violation, they verify the date and time, then input the building number and unit number. They have an option to attach multiple photos.

Once photos are attached and the user selects next, they can select the different violations they are reporting.

Users are then able to leave additional comments, can be limited to specific character count so conserve space in the database.

Upon hitting submit, the user is returned to the main screen for the location and a notification informs them the report has been submitted.
