

Hemp Seed Oil

Hemp seed oil has been dubbed, “Nature’s most perfectly balanced oil” due to the fact that it contains a perfectly balanced 3:1 ratio of both the required essential fatty acids (EFAs) for long term human consumption.

Omega 6 - Linoleic Acid (LA) :

Omega 3 - Linolenic Acid (LNA).

Only hemp seed oil contains Omega 6, Omega 3, and GLA and contains 75-80% polyunsaturated fatty acids - highest in the plant kingdom and unique among seed oils.

We are a Colorado based Health and Wellness company dedicated to offering the best available products to independent Health and Wellness professionals nationwide. We focus on state of the art soft gel encapsulation. The supercritical CO2 extraction method uses high pressure to force carbon dioxide through plant matter. This process has proven to be the most effective extraction method. This creates the purest botanical essences. Medical grade, 99.5% pure products are extracted for soft gels, tinctures, and vapor pens. Offering the highest quality and only the finest available plant-derived whole hemp ingredients is good medicine.

CBD Hemp Oil

What is CBD?

The endocannabinoid system (ECS) is a group of endogenous cannabinoid receptors located in the brain and throughout the central and peripheral nervous system. Cannabidiol (CBD) is one of over 60 structurally related cannabis plant-derived compounds that indirectly stimulate naturally occurring cannabinoid receptors on cells that mediate cell communication. CBD (unlike its psychotropic cousin delta-9 tetrahydrocannabinol - THC), elicits no euphoria or "high" sensation.

The endocannabinoid system exists in all animal life. In fact, the human brain actually contains more endocannabinoid receptors than any other G-coupled protein receptors (receptors that sense exocannabinoid activators and direct cellular responses). This is important because G-coupled protein receptors play a pivotal role in maintaining the body's homeostasis. These receptors are implicated in a variety of conditions.

What is CBD used for?

Due to its unique pharmacokinetics (what a body does to a substance) and pharmacodynamics (what it does to the body), CBD offers tremendous promise in supporting overall health by modulating neurotransmission in bodily systems.

The essential point is discovering what works for you. You'll need to work with your Health & Wellness professional to find the dosage that's right for you. CBD can be added to your current supplement routine as part of your overall health plan.

We produce whole hemp products because we believe the perfectly balanced Omegas add to the concept that hemp is a perfect super food. Our bodies seek homeostasis and CBD could play an important role in accomplishing that goal.

My Endocannabinoid System?

You may be surprised to learn hemp tinctures were available across the US in many pharmacies during the 1930's and our founding presidents Washington, Jefferson, and Lincoln grew hemp on their farms. Henry Ford used hemp in his early model T which also ran on hemp fuel. We don't make claims about the benefits of hemp CBD, rather we encourage you to research on your own and see if it makes sense for you.

It was not until the International Cannabis Research society began their work in 1990 that medically related benefits of hemp started making its rounds in the medical community.

Our organic and 50 state legal hemp CBD oil products are tested to ensure they are compliant with US hemp laws (less than .03% THC).

Your Health & Wellness provider has chosen our product because they can count on us to provide the cleanest and safest product available.
