**K-12 OUTREACH
PARTICIPANTS**

The STARS Computing Corps is a national alliance of colleges and universities with a mission to develop students and faculty as leaders who broaden participation in computing. At STARS member institutions, faculty support college students as they lead computer science service-learning activities, including near-peer outreach that introduces K-12 students to computing and within-department peer tutoring, mentoring, and research collaborations. College students who participate in STARS show significant academic gains, develop a strong sense of identity and community, and enhance their technical and professional skills. Faculty also benefit from membership in the STARS network of experts in broadening participation in computing. We invite you to join us!
