## Firm and Composite Information

St. James is an independent investment management firm that manages equity and balanced portfolios. The firm invests in U.S. and non-U.S. stocks, and cash or cash equivalents. The Core Equity portfolio seeks long-term capital appreciation in the equities of well-financed, well-managed companies believed to be priced below their intrinsic values. These accounts primarily invest in US equities and expect to remain fully invested in stock market investments, but as market conditions warrant, SJIC will allocate portions of the accounts into foreign equities and fixed-income, to include domestic, foreign and defensively positioned ETFs to reduce its exposure to market fluctuations. The Core Equity Composite was created in January 2005 and has an inception date of June 1999. A complete list and description of firm composites is available upon request.

## Benchmark

The benchmark is the S&P 500 Index Net Total Return, a market-capitalization weighted index containing the 500 most widely held companies (400 industrial, 20 transportation, 40 utility and 40 financial companies) chosen with respect to market size, liquidity, and industry. The volatility of the S&P 500 Index may be materially different from that of the strategy depicted, and the holdings in the strategy may differ significantly from the securities that comprise the S&P 500 Index. The S&P 500 Index is calculated on a total return basis with dividends reinvested after the deduction of withholding taxes and is not assessed a management fee. The comparison of results to an index does not disclose all facts materially relevant to the comparison.

## Performance Calculations

Valuations and returns are computed and stated in U.S. dollars, and individual portfolios are revalued monthly. Portfolios also are revalued intra-month in cases where cash flows in excess of 10% of the portfolio's value occur. Pricing information is supplied by the account custodian. The firm uses the Modified Dietz formula to calculate monthly returns and links these returns geometrically to produce an accurate time-weighted rate of return. Composite returns are asset-weighted. Gross of fees returns are calculated gross of management and custodial fees, and net of transaction costs. Net of fees returns are calculated net of management fees and transaction costs, and gross of custodian fees. Both returns are calculated gross of all withholding taxes on foreign dividends. Accruals for fixed income and equity securities are included in calculations. The Core Equity Composite contains portfolios with bundled fees. The bundled fee includes all charges for trading costs, portfolio management, custody, and other administrative fees. Prior to 2013, Net returns were calculated by deducting the maximum applicable advisory fee for this strategy of 1.25% annually, pro-rated on a quarterly basis. Beginning January 1, 2013, Net returns are calculated net of the actual annual fees deducted at the end of the period. Returns in this presentation include reinvestment of all income.

Additional information regarding St. James' fees is included in Part 2A of its Form ADV. Internal dispersion is calculated using the asset-weighted standard deviation of all accounts included in the composite for the entire year; it is not presented for periods less than one year or when there were five or fewer portfolios in the composite for the entire year. The three-year annualized standard deviation measures the variability of the composite and the benchmark returns over the preceding 36-month period. The standard deviation is presented for 2002 through 2010, though it is not required for periods prior to 2011. For the years 1999 and 2000 of this composite, performance can be confirmed by electronic records rather than client custodial statements, which are no longer available for this time period. This presentation does not disclose the effect of material or economic conditions on the results portrayed. Policies for valuing portfolios, calculating performance, and preparing compliant presentations are available upon request.
