3. Rabbits
4. Guinea Pigs
5. Chinchillas
6. Hamsters
7. Birds
8. Reptiles

PROBIOTIX PLUS is recommended to be used

- Newborns & during weaning
- Stress induced diarrhoea
- Travelling induced diarrhoea
- Intense physical exercise induced diarrhoea
- After the consumption of deworming medications
- After the consumption of antibiotic
- Change in environment
- Change in diet
- Vaccination/ Vet visits/ Hospitalisation

What are Direct-Fed Microbials (DFMs)?

- Direct Fed Microbials are probiotics which can be directly fed to the animal.
- Probiotics introduces beneficial bacteria into the large bowel or colon which helps boost the levels of beneficial bacteria.
- Probiotics are useful to introduce new beneficial bacteria after antibiotic therapy because antibiotics destroy both the good and bad bacteria at the same time.

What are prebiotic?

Prebiotic is a dedicated plant fibre which beneficially nourishes the probiotic or beneficial bacteria in the gut. In other words, prebiotics functions like a fertiliser to the beneficial bacteria.

Why choose PROBIOTIX PLUS?

1. High density of probiotics enable rapid colonisation
2. Contains inulin, source of fibre which nourishes the beneficial bacteria
3. Low risk of constipation due to absence of pectin and kaolin

IMPORTANT

PROBIOTIX PLUS is developed and intended for supplemental and supportive feeding. It is not a replacement for prescribed medications nor a cure for various ailments. Your veterinarian has the professional knowledge in the application of probiotics. Do consult your veterinarian for the most appropriate advice.
