

Dear Sirs!

ALTECO specialists provided electrical services to our commercial clients for over 10 years. Our solid foundation of experience, expertise and high quality standards demonstrates our commitment to unparalleled client satisfaction and adherence to both schedule and budget requirements. The breadth of our success is due in part to our ability to provide complete electrical services for all facets of operation.

We specialise in the complete installation of electrical services to commercial, industrial and public developments. We also carry out routine maintenance to existing electrical installations.

Our range of services include: MV electrical installation, HV cabling and switchboards, normal & emergency lighting, general power systems, grounding and bonding, lightning protection, general electrical refurbishment.

Retail Electrical Fixturing - We provide over 10 years of experience with the specialized deployment of retail electrical lighting. The unique demands of the retail market require an electrical contractor to possess not only technical skills, but also to demonstrate an understanding of the specific needs required by your operations.

Commercial Construction - ALTECO has the proven capability to execute all aspects of electrical construction, from the first stages of design through to the timely completion of the project. We have the resources and abilities to provide complete services and meet all your required objectives.

Renovations - ALTECO has extensive experience in completing electrical renovation projects, which often present their own unique challenges. In addition, our overall understanding of the renovation process allows us to manage the sometimes, complex coordination between all involved. We are capable of completing renovations with minimal disruption to your operating activity and customers.

Power Distribution - The integrity of any project begins with the power distribution system. ALTECO is able to design and implement new systems, as well as reconstruct an existing PDS; we maintain a strategic relationship with manufacturers for efficient sourcing of products.

Alternate Power sources - ALTECO has an extensive history of working with many forms of secondary power supplies and generation, and a firm grasp of new technologies and solutions to reduce the risk of poor power, power interruption, and disaster relief.

Energy management - Our wide spectrum of involvements means that technology, products, government incentives and project execution are best leveraged to the benefit of the end user. An effective energy management program allows the consumer to establish and maintain lower operating costs while ensuring a positive environmental impact.

Structured cabling - ALTECO provides the expertise for the design and implementation of complete data and voice systems. Our technicians will supply and install a complete network from the incoming D-marc to the PC.

Our range of services include:

1. Computer Room Infrastructure
2. Data Networks
3. Telephone Networks
4. Fibre Optic Installation and Termination CCTV and Security Systems
5. WLAN

Solar

1. Design and co-ordination with local utilities
2. On site logistics and planning
3. Installation of all electrical equipment and inverters
4. Installation of PV panel mounting systems
5. Installation and commissioning of PV panels
6. Installation and commissioning of monitoring systems
7. Service and maintenance
8. Innovative technologies and design to ensure you maximize rooftop space and returns

Combined Electrical & Mechanical

ALTECO can provide a fully combined Mechanical and Electrical service in which clients benefit from a seamless supply covering all their M&E requirements.

For joint mechanical and electrical projects, the company joins forces with an experienced mechanical contractor. Full co-ordination of the services is jointly undertaken by ALTECO and its long-term mechanical partner, to provide a first class mechanical and electrical installation. Over the years this method has enabled ALTECO to deliver multiple combined service solutions.

Two separate specialist contractors have advantages over a joint mechanical and electrical company. Each company can specialize in its own right, without being stronger in a particular discipline. On electrical and mechanical contracts ALTECO takes full contractual responsibility.

Day to day operations are controlled by the joint co-ordinating project managers based on site. A contracts manager takes overall control and visits the site when required.

Our licensed and certified electricians, and millwright technicians are dedicated to providing you with quality repairs and installations for all your business needs. Our service team operates 24 hour a day, 7 days a week.

For all your clarifications, needs, and requirements please contact Serge Ivanoff at 416-890-8460 or via e-mail contact@altecogroup.net
