

*The 8020 Water Purification System utilizes an advanced 9 stage Ultra-Filtration or Reverse Osmosis process to ensure that our customers drink cleaner, healthier water. The 8020 has an adjustable cooling capability, which is powered by an efficient LG Compressor.*

#### Specifications

Height: 41.2" H x 12.1" W x 12.3" D

Cold Tank Capacity: 1.2 gal

Hot Tank Capacity: .55 gal

Water Connection: ¼" tubing

Weight: 40 lbs. (empty)

Electrical Supply: 115V/60Hz

Model 8020

Stainless Steel containment tanks

Removes up to 99% of unhealthy contaminants

Energy boost with re-mineralization filters

Improves the odor, appearance and taste of your drinking water

Double float shut off system to prevent overflows

keep plastic bottles out of landfills

PURE, ENDLESS WATER

TEL.: 787-409-8148

## 9 Stage Purification Process

### Stage 1. Sediment Filter

Removes sand, rust and silt that is present in most municipal water sources.

### Stage 2. Pre-Carbon Filter

Advanced Carbon technology - removes hundreds of cancer-causing constituents such as pesticides, insecticides, petrochemicals, M.T.B.E's, PCB's, defoliants, and benzene.

### Stage 3a & 3b. RO / UF Membrane

(a) Reverse Osmosis technology - removes any molecular compounds smaller in size than water molecules. Such compounds include salt, iron, fluoride, lead, and calcium down to a .0001 of a micron.

(b) UF membrane can remove most of harmful substances larger than 0.01 of a micron.

### Stage 4a. PH Filter

Increases pH levels to a balanced state.

### Stage 4b. Sanitization

Bacteriostatic (inhibits bacteria growth).

### Stage 4c. Energy

Adds electrolytes.

### Stage 4d. Re-Mineralization

Adds Calcium, Sodium and Potassium.

### Stage 5. TCR (Taste & Odor Management) & Final Polishing

Taste and odor filter gives the water a final polish.

Help keep plastic bottles out of landfills
