WHY GO SOLAR?

You can trust in our vast knowledge and experience in the industry to provide you with the most suitable, economic and advanced system on the market. The team of professionals at Stralis Energy collectively have over 35 years designing and installing commercial scale solar plants with a strong background in engineering and passion for technical advancements. There are many good reasons to install a commercial scale solar energy system. Here's just a few...

Economic

The price of solar power has dropped dramatically over recent years, while electricity prices have skyrocketed – and the price hikes are likely to continue. Now more than ever before, it is the *economic* choice to generate electricity at a lower cost than purchasing from a utility by harvesting the power of the sun!

If you are paying more than 20c/kWh for your daytime electricity usage, a system sized to your daytime load will provide a payback time of between 3 and 7 years – after which, the electricity you generate is essentially FREE!

In addition to outright purchase, we also offer other options – solar leasing and Power Purchase Agreements (PPAs). Your organisation can benefit from solar with zero capital outlay. These arrangements are also backed by a solid performance guarantee.

"Going solar translates to a huge reduction in your medium to long term operational costs."

- Generate revenue by selling your plant's power to your building's tenant or to electricity retailers.
- Increase the value of your building by improving your NABERS/Greenstar rating.
- Government solar rebates, grants and tax breaks are available

Social and promotional

Enhance your appearance as a GREEN brand and get efficiency benefits at the same time! Stralis Energy can educate you and your staff to ensure your business gets the exposure and results it deserves from making the choice to **"go solar"**.

Environmental

Generate clean, green energy for decades – well beyond the 25-year warranty period on the panels. Solar panels used by Stralis Energy such as REC/Q Cell Solar modules have low embodied energy of less than 12 months, meaning that the life-cycle environmental impact is minimal.

WHY CHOOSE STRALIS ENERGY?

We're a local company that understands the local economic and environmental conditions and will be there to support your business in the long term.

Here's some more good reasons to select Stralis Energy as your commercial solar power partner.

- Constant product research – we are always assessing value for money based on long-term performance and work with the world's leading suppliers of components.
- In-house engineers – seasoned industry professionals.
- Extensive experience in all types of installations, from the straightforward, to incredibly complex.

The following are some of the commercial solar case studies relating to arrays we've installed:

- Connolly Key joints – 60kW (Casino, NSW)
- Commercial block – 60kw (Three Chain Road, Lismore, NSW)
- Toyota – 80kw, 4 x 20kw systems (New cars showroom, Used car showroom, Parts centre, Body and Paint Shop – Lismore, NSW)
- Vet – 15kw Hybrid - Battery ready solar (Alstonville, NSW)

Interested? Next steps

Call our Commercial Sales Team on 1800 Stralis (787 254) or alternatively email info@stralisenergy.com.au to register your interest. If you have a rooftop, why not put it to work?! Most states offer solar feed in tariff programs and some have been expanded recently to include medium scale solar farms!
