This 2oz 2 part set treats 448 litres.

What is Z⁷?

Z⁷ is a unique, super-concentrated, 2-part probiotic enzymatic cleanser. It is designed to help your plants reach their genetic potential by constantly cleansing the plant's root system.

Whether you're growing in soil or hydro, poor quality water is the biggest problem facing growers today. It causes microscopic inanimate slime to form on the roots, restricting the proper amount of water, plant food and oxygen the plant needs. Z⁷ significantly improves the water quality and rapidly eliminates root related problems. No more yellowing leaves, leaf curl, slow growth, pH fluctuations, brown slimy roots and slimy water tanks!

Z⁷ will keep your plants healthy by ensuring the roots' osmotic process is kept at its highest levels. Z⁷ achieves this by guarding against Pythium, root rot and minerals adhering to pots and equipment.

Using Z⁷ with AutoPot Watering Systems

Z⁷ is the ultimate system cleanser as it eliminates inanimate slime, plant waste, organic waste and mineral buildup from hydroponic roots, piping, sprayers, tubes and tanks while the plants are growing. Use it with your Autopot watering system throughout the grow to keep the system clean so your plants can reach their full potential.

How to use Z⁷

Directions for use:

Shake the bottle thoroughly. Each part has its own dosage.

Dosage:

Use 5ml Part 1 and 5ml Part 2 for every 38 litres of nutrient solution or water.

Use ½ ml of each part for every 3.8 litres of nutrient solution or water thereafter.

Do not use more than the recommended dose.

Using Z⁷ for the first time:

If growing with non-organic/mineral nutrients in the tank (e.g. Hydro, Coco & Soil), mix Z⁷ with water and flush the plant's growing media very well until the EC/PPM in the last of the runoff from pot matches your water supply EC/PPM reading. Wait 2 hours before feeding your plants will allow them to fully hydrate. Then, continuously use Z⁷ in feeding and or watering programs and at every tank top up.

If growing with organic nutrients already mixed into your soil (e.g Supersoil), add Z⁷ to the water in your tank without flushing first.
