Dear Leslie Ashton and Eric Barrette,

Leo was just 27 pounds when he was rescued, he should have been 60. Sick, anemic and heartworm positive, Leo needed intensive veterinary care. At just two years of age, it is heartbreaking!

After weeks of antibiotics, multiple meals each day, and medicated baths for his skin condition, Leo now weighs almost 50 pounds and was finally healthy enough to be neutered. He was recently adopted by a family who loved his spirit.

Leo is just one of almost 15,000 Labs saved by Lab Rescue of the LRCP.

Yes, that number is real! 15,000 Labs saved!

We need your donation to make sure that even more Labs can be saved.

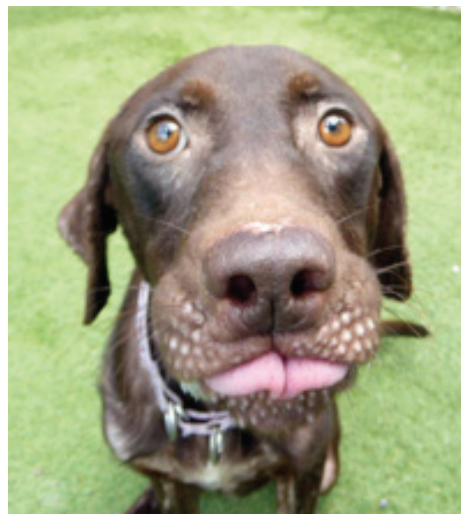

Please use the enclosed envelope and donation form or visit www.lab-rescue.org/2016 to make your gift now.

Thanks to your generosity and support, this month, Lab Rescue of the LRCP is celebrating two important milestones. **We are celebrating our 25th Anniversary and early in the New Year, we expect our 15,000th Lab saved.**

This year marked another important milestone. **Lab Rescue of the LRCP has once again expanded our intake area to help more Labs in need. We are increasing our established shelter relationships from 60 shelters to more than 80.** The latest expansion includes high kill shelters in North Carolina and Ohio, as well, we have intensified our efforts in more areas of Pennsylvania. Lab Rescue will be there to take as many Labs as we can and find them new homes with our loving adopting families.

Leo—Day 5 after being rescued

Leo owes his life to this expansion. He was saved from a high kill shelter in our expanded area in North Carolina.

Leo's veterinary needs are not unique. Many of the Labs we rescue have multiple health challenges and 2016 is the third year in a row that the cost of veterinary care has grown because of the needs of those we rescue. The incidence of heartworm is increasing, skin conditions like flea dermatitis and non-contagious mange are on the rise, in addition to a variety of flea, mosquito and tick borne diseases. Many have not received even basic veterinary care.

When you donate to Lab Rescue, you ensure that Labs like Leo will

Leo—healing and ready for adoption

have a long and loving life.

Another example of how we're called on to save lives is Roscoe, whose severe neglect nearly ended his life.

Local animal control officers received a call about a dog lying in the middle of the road. It was Roscoe. He had been hit by a car. His family couldn't afford the extensive medical care that he needed and left him, injured, outside.

By the time he got help he was almost dead from an infection in his injured leg. No wound cleaning. No antibiotics. No love, care or shelter. Roscoe almost died.

Today, though we could not save his leg, Roscoe is enjoying his first holiday with a loving family. Roscoe has been adopted!

We can only help dogs like Roscoe if we have the funds to pay for veterinary care. Please help dogs like Roscoe by donating today.

I'm always asked 'Why do so many Labs need saving?' Every dog we rescue has their own story of need. More and more are like Leo and Roscoe; cases of neglect. We don't ask 'how' or 'why', but jump in when and where we're needed.

When we started our life saving work 25 years ago, we never imagined how great the need would be and how critical the Rescue would be for 15,000 Labs. With your generous support, we plan on being here for as long as we're needed!

Thank you for continuing to support Lab Rescue of the LRCP.

Sincerely,

Sterrie Weaver
President

Dear Fred,

Leo was just 27 pounds when he was rescued, he should have been 60. Sick, anemic and heartworm positive, Leo needed intensive veterinary care. At just two years of age, it is heartbreaking!

After weeks of antibiotics, multiple meals each day, and medicated baths for his skin condition, Leo now weighs almost 50 pounds and was finally healthy enough to be neutered. He was recently adopted by a family who loved his spirit.

Leo is just one of almost 15,000 Labs saved by Lab Rescue of the LRCP.

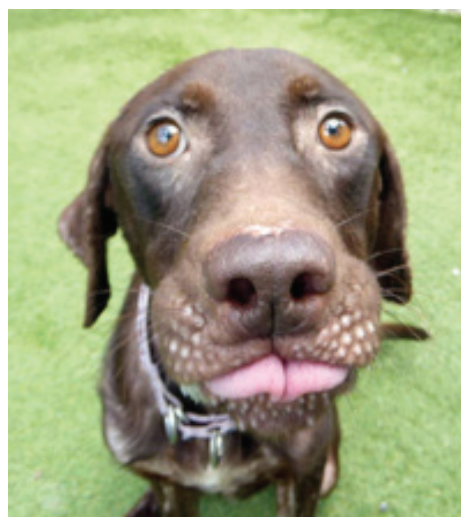

Yes, that number is real! 15,000 Labs saved!

We need your donation to make sure that even more Labs can be saved.

Please use the enclosed envelope and donation form or visit www.lab-rescue.org/2016 to make your gift now.

Thanks to your generosity and support, this month, Lab Rescue of the LRCP is celebrating two important milestones. **We are celebrating our 25th Anniversary and early in the New Year, we expect our 15,000th Lab saved.**

This year marked another important milestone. **Lab Rescue of the LRCP has once again expanded our intake area to help more Labs in need. We are increasing our established shelter relationships from 60 shelters to more than 80.** The latest expansion includes high kill shelters in North Carolina and Ohio, as well, we have intensified our efforts in more areas of Pennsylvania. Lab Rescue will be there to take as many Labs as we can and find them new homes with our loving adopting families.

Leo owes his life to this expansion. He was saved from a high kill shelter in our expanded area in North Carolina.

Leo's veterinary needs are not unique. Many of the Labs we rescue have multiple health challenges and 2016 is the third year in a row that the cost of veterinary care has grown because of the needs of those we rescue. The incidence of heartworm is increasing, skin conditions like flea dermatitis and non-contagious mange are on the rise, in addition to a variety of flea, mosquito and tick borne diseases. Many have not received even basic veterinary care.

When you donate to Lab Rescue, you ensure that Labs like Leo will

Leo—healing and ready for adoption

Leo—Day 5 after being rescued

have a long and loving life.

Another example of how we're called on to save lives is Roscoe, whose severe neglect nearly ended his life.

Local animal control officers received a call about a dog lying in the middle of the road. It was Roscoe. He had been hit by a car. His family couldn't afford the extensive medical care that he needed and left him, injured, outside.

By the time he got help he was almost dead from an infection in his injured leg. No wound cleaning. No antibiotics. No love, care or shelter. Roscoe almost died.

Today, though we could not save his leg, Roscoe is enjoying his first holiday with a loving family. Roscoe has been adopted!

We can only help dogs like Roscoe if we have the funds to pay for veterinary care. Please help dogs like Roscoe by donating today.

I'm always asked 'Why do so many Labs need saving?' Every dog we rescue has their own story of need. More and more are like Leo and Roscoe; cases of neglect. We don't ask 'how' or 'why', but jump in when and where we're needed.

When we started our life saving work 25 years ago, we never imagined how great the need would be and how critical the Rescue would be for 15,000 Labs. With your generous support, we plan on being here for as long as we're needed!

Thank you for continuing to support Lab Rescue of the LRCP.

Sincerely,

Sterrie Weaver
President

Leo is just one of almost 15,000 Labs saved by Lab Rescue of the LRCP.

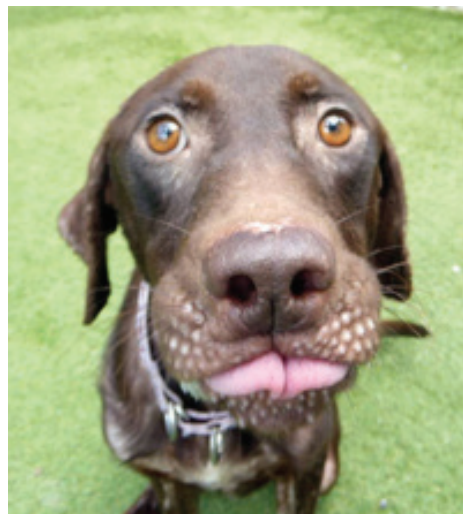

Yes, that number is real! 15,000 Labs saved!

We need your donation to make sure that even more Labs can be saved.

Please use the enclosed envelope and donation form or visit www.lab-rescue.org/2016 to make your gift now.

Thanks to your generosity and support, this month, Lab Rescue of the LRCP is celebrating two important milestones. **We are celebrating our 25th Anniversary and early in the New Year, we expect our 15,000th Lab saved.**

This year marked another important milestone. **Lab Rescue of the LRCP has once again expanded our intake area to help more Labs in need. We are increasing our established shelter relationships from 60 shelters to more than 80.** The latest expansion includes high kill shelters in North Carolina and Ohio, as well, we have intensified our efforts in more areas of Pennsylvania. Lab Rescue will be there to take as many Labs as we can and find them new homes with our loving adopting families.

Leo—Day 5 after being rescued

Leo owes his life to this expansion. He was saved from a high kill shelter in our expanded area in North Carolina.

Leo's veterinary needs are not unique. Many of the Labs we rescue have multiple health challenges and 2016 is the third year in a row that the cost of veterinary care has grown because of the needs of those we rescue. The incidence of heartworm is increasing, skin conditions like flea dermatitis and non-contagious mange are on the rise, in addition to a variety of flea, mosquito and tick borne diseases. Many have not received even basic veterinary care.

When you donate to Lab Rescue, you ensure that Labs like Leo will

Leo—healing and ready for adoption

have a long and loving life.

Another example of how we're called on to save lives is Roscoe, whose severe neglect nearly ended his life.

Local animal control officers received a call about a dog lying in the middle of the road. It was Roscoe. He had been hit by a car. His family couldn't afford the extensive medical care that he needed and left him, injured, outside.

By the time he got help he was almost dead from an infection in his injured leg. No wound cleaning. No antibiotics. No love, care or shelter. Roscoe almost died.

Today, though we could not save his leg, Roscoe is enjoying his first holiday with a loving family. Roscoe has been adopted!

We can only help dogs like Roscoe if we have the funds to pay for veterinary care. Please help dogs like Roscoe by donating today.

I'm always asked 'Why do so many Labs need saving?' Every dog we rescue has their own story of need. More and more are like Leo and Roscoe; cases of neglect. We don't ask 'how' or 'why', but jump in when and where we're needed.

When we started our life saving work 25 years ago, we never imagined how great the need would be and how critical the Rescue would be for 15,000 Labs. With your generous support, we plan on being here for as long as we're needed!

Thank you for continuing to support Lab Rescue of the LRCP.

Sincerely,

Sterrie Weaver
President
Lab Rescue of the LRCP

Roscoe—ready for a new life

Dear Holly,

Leo was just 27 pounds when he was rescued, he should have been 60. Sick, anemic and heartworm positive, Leo needed intensive veterinary care. At just two years of age, it is heartbreaking!

After weeks of antibiotics, multiple meals each day, and medicated baths for his skin condition, Leo now weighs almost 50 pounds and was finally healthy enough to be neutered. He was recently adopted by a family who loved his spirit.

Leo is just one of almost 15,000 Labs saved by Lab Rescue of the LRCP.

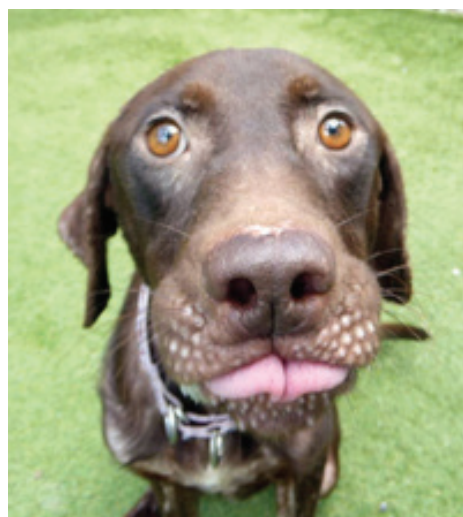

Yes, that number is real! 15,000 Labs saved!

Thanks to your generosity and support, this month, Lab Rescue of the LRCP is celebrating two important milestones. **We are celebrating our 25th Anniversary and early in the New Year, we expect our 15,000th Lab saved.**

This year marked another important milestone. **Lab Rescue of the LRCP has once again expanded our intake area to help more Labs in need. We are increasing our established shelter relationships from 60 shelters to more than 80.** The latest expansion includes high kill shelters in North Carolina and Ohio, as well, we have intensified our efforts in more areas of Pennsylvania. Lab Rescue will be there to take as many Labs as we can and find them new homes with our loving adopting families.

Leo owes his life to this expansion. He was saved from a high kill shelter in our expanded area in North Carolina.

Leo's veterinary needs are not unique. Many of the Labs we rescue have multiple health challenges and 2016 is the third year in a row that the cost of veterinary care has grown because of the needs of those we rescue. The incidence of heartworm is increasing, skin conditions like flea dermatitis and non-contagious mange are on the rise, in addition to a variety of flea, mosquito and tick borne diseases. Many have not received even basic veterinary care.

When you donate to Lab Rescue, you ensure that Labs like Leo will

Leo—healing and ready for adoption

Leo—Day 5 after being rescued

have a long and loving life.

Another example of how we're called on to save lives is Roscoe, whose severe neglect nearly ended his life.

Local animal control officers received a call about a dog lying in the middle of the road. It was Roscoe. He had been hit by a car. His family couldn't afford the extensive medical care that he needed and left him, injured, outside.

By the time he got help he was almost dead from an infection in his injured leg. No wound cleaning. No antibiotics. No love, care or shelter. Roscoe almost died.

Today, though we could not save his leg, Roscoe is enjoying his first holiday with a loving family. Roscoe has been adopted!

We can only help dogs like Roscoe if we have the funds to pay for veterinary care. Please help dogs like Roscoe by donating today.

I'm always asked 'Why do so many Labs need saving?' Every dog we rescue has their own story of need. More and more are like Leo and Roscoe; cases of neglect. We don't ask 'how' or 'why', but jump in when and where we're needed.

When we started our life saving work 25 years ago, we never imagined how great the need would be and how critical the Rescue would be for 15,000 Labs. With your generous support, we plan on being here for as long as we're needed!

Thank you for continuing to support Lab Rescue of the LRCP.

Roscoe—ready for a new life

Dear Larissa and Timothy Fain,

Leo was just 27 pounds when he was rescued, he should have been 60. Sick, anemic and heartworm positive, Leo needed intensive veterinary care. At just two years of age, it is heartbreaking!

After weeks of antibiotics, multiple meals each day, and medicated baths for his skin condition, Leo now weighs almost 50 pounds and was finally healthy enough to be neutered. He was recently adopted by a family who loved his spirit.

Leo is just one of almost 15,000 Labs saved by Lab Rescue of the LRCP.

Yes, that number is real! 15,000 Labs saved!

We need your donation to make sure that even more Labs can be saved.

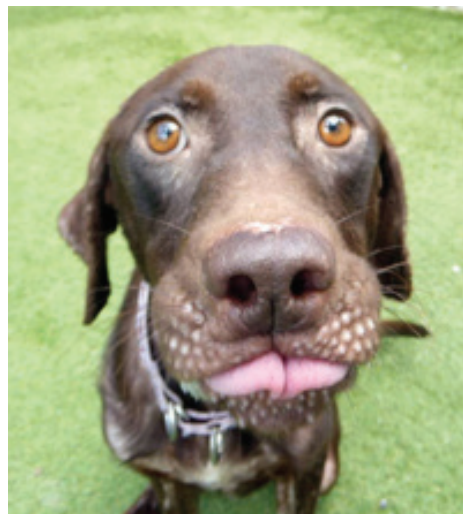

Please use the enclosed envelope and donation form or visit www.lab-rescue.org/2016 to make your gift now.
