- Designed to fit perfectly in a lunch box or any other pre-set packaging
- Package designed for easy drink and squeeze
- Appeals to a wide range of the market
- Very cost effective
- Shelf life of 12 months

PACKAGING AND DESIGN

Our Aseptic Tetra Pak cartons are made of renewable materials, recyclable paperboard and no refrigeration is needed when distributed and stored. Our Aseptic packages and ambient transportation allow our customers to capitalize on opportunities wherever they may arise around the globe.

The Combination of the Aseptic process and packaging reduces waste, makes distribution extremely cost effective and convert our product into a consumer ready format as well as making it possible to reach consumers in remote locations.

WATER – THE MOST IMPORTANT LIQUID IN THE WORLD

A core element in nature and an incredibly popular thirst-quencher among consumers, water is a global product in constant development. By choosing carton packaging instead of plastic you can please nature and consumers alike.

Despite its abundance, water is still one of the most popular drinks in the world. Water is considered a healthy alternative to soft drinks and other beverages, and the market is growing fast.

AVAILABLE PORTION SIZE

We are currently selling and distributing portion sizes in 100ml, 200ml and 1 Litre. We will produce to consumer needs if required.

ENVIRONMENT AND GOING GREEN

Tetra Pak packaging is made of 73% paperboard which is the main material used. It is a fully renewable resource that will bio-degrade into soil. Only 2.5% of water is fresh water and only 1% is accessible, the increase in population, social and economic activities in the world has affected the availability of fresh water resources. The water footprint ideology has increased due to scarcity of water and Tetra water has assisted in reducing the water footprint of other packaged water by 500%.
