C-Safe Software is an integrated suite of software designed to manage personnel, training, hazards, inspections, incidents, meetings, and health monitoring and any follow up actions resulting from these activities.

The software is available in several versions and is designed to scale from low cost single user installations for small contracting / service companies, up to multi-user large mines or construction companies with thousands of employees. The software is fully customizable to suit your business and provides an easy and economical way to assist companies in complying with all their safety and training requirements.

If your company has a desire to improve their safety management software or your current system is poor, expensive, time consuming, difficult to use or poorly integrated, contact Chasm Consulting admin@chasm.com.au for further information.
