workshop

handmade spectacles

A black and white photograph capturing a close-up of a craftsman's hands as they meticulously adjust a pair of eyeglasses. The craftsman, whose face is partially visible in profile on the right, is using a small, thin tool to work on the hinge of the glasses. The glasses have a dark, possibly wooden or high-quality plastic frame. In the background, several other pairs of eyeglasses with various frame styles are scattered on a light-colored, textured surface, likely a workbench. The lighting is soft and focused, highlighting the textures of the hands, the tool, and the eyeglass frames. A semi-transparent grey rectangular box is overlaid on the lower-left portion of the image, containing the text "craft work" in a clean, white, sans-serif font.

3D printed spectacles

A close-up photograph of a 3D printer's extruder head. The head is white and metallic, with a brass-colored nozzle assembly. It is positioned over a flat, metallic surface, likely a build plate. The nozzle is extruding a bright blue filament, which is being laid out in a series of concentric circles. The background is blurred, showing parts of the printer's frame and a large, dark, circular component. The lighting is bright, highlighting the metallic surfaces and the vibrant blue of the filament.
