

Patient Safety Solutions For Every Hospital

Patient safety is a global concern, particularly in Asia. With rising demand for healthcare in Asia, there is a more urgent call for greater safety awareness, adoption of best practices and effectiveness of healthcare performance management systems. Incident reporting system is one of the essential mechanisms to surface patient safety risks and build a patient safety culture. However, for it to be effective, incident reporting needs to be easier, meaningful with automated workflows, analysis and insights so improvements can be made. Used effectively, online incident reporting systems can address patient safety concerns and bring great value to hospitals.

Why QUASR?

QUASR is built for hospitals in Asia, where demand for healthcare management solutions to improve safety of patients and prevent harm is rising but unmet. It fills the gaps in the market for affordable, easy to set up, modern and user-friendly solutions. A SaaS solution with built-in best practices, QUASR is for individual or chain of hospitals taking the first steps toward online incident reporting and process automation, as well as for hospitals using legacy incident reporting systems to upgrade.

Key System Features

Quick and easy to report incident in less than a minute

Web-based and mobile-enabled for all screen sizes

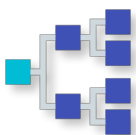

Save as draft and review loop between reporter and supervisor

Flag SREs and externally reportable events

Role-based access control

Insightful and interactive reports and dashboards

Modern interface, predictable stepper forms with dynamic skip logic

How can your hospital benefit from QUASR?

- ▶ Avail of built-in healthcare best practices
- ▶ Quick and easy to set up - save time and cost
- ▶ Intuitive features and mobile-enabled
- ▶ Stepper forms and skip logic design to drive efficiency
- ▶ Spend less time on reporting and more on improvement efforts
- ▶ Timely and interactive reports and dashboards
- ▶ Make incident reporting part of patient safety culture
- ▶ Modular, efficient and secure SaaS solution
- ▶ Cloud-based and affordably priced

Make Incident Reporting Easy, Meaningful and Part of Your Patient Safety Culture

A Secure and Enterprise-Class Solution

QUASR is built on top of open-source frameworks and to industry standard. All levels of security features are built in the framework. Data is also protected based on business roles. QUASR is a secure cloud-based SaaS solution.

Integration with other enterprise applications or legacy systems is implemented via standard interfaces like csv, xml database or standard REST APIs. Where applicable, domain specific interfaces like HL7 messaging can be made available.

About Healthcare GRC

Healthcare GRC provides affordable and easy to deploy healthcare management solutions that help hospitals manage incidents, risks, audit and patient feedback more effectively. Our SaaS solutions improve patient safety, service quality and care experience and reduce harm by automating key processes.
