

Therapia

AN EHR DEVELOPED BY PHYSICIANS
AND HEALTHCARE PROFESSIONALS

*With Decades of Experience in
Behavioral Health*

Our Software

Organic Documentation

Therapia set out to provide behavioral health clinicians a familiar platform to engage in chart level documentation for their patient care. Our software is built using each company's individualized workflow to provide efficient and valid information. By engaging in that recognized foundation, Therapia achieves the feel of an actual chart with the functionality of an electronic record.

Patient Engagement

Using our proprietary Therapia Modules, we seamlessly digitalize therapy for use in both individual and group therapy. An optional function of the software, Therapia Modules allow the clinician to individualize therapy in a hospital setting. Furthermore, we incorporate a Family Portal through the software so that therapy can involve the entire family during the client's hospitalization. This allows the client's support system to become an integral part of the client's improvement in the hospital.

Risk Management/Quality Improvement

To facilitate and navigate the ever-changing regulatory environment, Therapia built tailored risk management/quality improvement capabilities into the software. It is capable of tracking deficiencies in the documentation within the hospital, observing trends in real time to engage risk improvement measures, and providing data required for Quality Measures. Therapia feels this risk functionality will help identify potential errors and issues before they become systemic.
