can rely on from
Ford & Doonan

Air Conditioning and Solar Electricity – The Perfect Partners

Fact 1 Air conditioning can be one of the highest consumers of power in your home or office.

Fact 2 Western Australia is one of the sunniest places on earth!

Whether you're looking for your first new air conditioning system, upgrading an old system, or just thinking about reducing your power costs, then you're smart to be looking into Solar PV. Both homes and commercial premises can save significantly every year by investing in a quality solar system from Ford & Doonan. A solar system can pay itself off in a few short years, and then you'll enjoy low cost energy into the future.

Turn over to see why not all solar system suppliers are the same...

"Making more Australians comfortable"

Why go solar?

Western Australia is the perfect place for solar power and there are many benefits of 'going solar'. A solar photovoltaic (PV) system consists of two main elements – a set of solar panels, which convert sunlight into electricity, and an inverter to take that electricity and feed it into your home or business via a switchboard.

Save on your power bills

Your electricity bill will go down because you will be using power generated from your solar panels during the day rather than only from the electricity grid. If you also install a battery with your solar PV system, you can store any power generated, but not used through the day, to use once the sun has gone down. This should cut your electricity bill even more. Depending on the system that you install, and how much electricity that you use through the day, you should see the initial cost of the system pay for itself after only a few years.

Good for the environment

The benefit to the environment of using solar electricity to help power your home or business is clear. Ford & Doonan solar PV systems generate no direct greenhouse gas emissions because the electricity is made from converting sunlight rather than burning fossil fuels like coal or gas. We have sunshine all year round and as a 'renewable' energy source, it will never run out, whereas coal and gas are fossil fuels that are contributing to climate change and will eventually run out.

Connect to the grid

It is generally possible to connect your solar PV system to the electricity grid, and with that you may have the option of selling and feeding in your unused solar power back to Synergy. By connecting to the grid you have the security and back-up of the regular system for the occasional times that the sun isn't shining or after dark, plus you will offset some of the cost of the electricity that you buy from the grid. And remember that the electricity that you buy from the grid is only going up in price every year.

Low maintenance

Ford & Doonan solar PV systems are generally very low maintenance. Solar panels require cleaning only occasionally and should last around 25 years. Most solar panels come with a 25 year guarantee and inverters with a 10 year guarantee.

Government subsidies

Through the Small-scale Renewable Energy Scheme the Australian Government offers financial incentives for eligible Ford & Doonan solar PV systems. We can use these to discount the cost of your system, and we will take care of the paperwork on your behalf.

Add value to your property

If you decide to sell or rent out your home or business premises, a Ford & Doonan solar PV system is a desirable feature and may add market value.

Air Conditioning and Solar Electricity – The Perfect Partners

- It makes sense while the air conditioning is being installed that the same company installs your solar system.
- We'll have electricians and installers on site already, meaning we can pass on those savings to you.
- Ask about our "Package Deals" when you enquire about your air conditioning. Solar Systems start from just \$2700 inc GST fully installed.

Why Ford & Doonan Solar?

Solar companies have a habit of opening, offer cheap prices, do business for a year or two, and then they are gone! This can leave you "on your own" when it comes to after sales service or warranty. Can you remember a single solar company from 5 years ago that's still in business today?

For 35 years Ford & Doonan have cooled West Australians. As a trusted brand, you can rely on Ford & Doonan to install your solar system, and be available for support, long after the others have gone.

The Ford & Doonan brand stands for quality work, quality products, and peace of mind when purchasing air conditioning. And now the same applies to solar energy systems.
