WHAT ARE LIVE EXTRACTS?

Cresco live extracts start with the very best flower. After a long and full life on the stem, our frosty buds are whisked away to be trimmed and immediately flash-frozen, preserving the terpene content of the original plant. After a spin through our butane extractor, the resulting live extract encapsulates all of the aroma, flavor, and delicately-balanced cannabinoid profiles of the living cultivar.

This superior extract is further finessed to a variety of forms, including live sauce, live sugar, live budder, and live wax. Great for users who enjoy dabbing, vaping, and savoring full flavor extracts.

THE LIVE EXTRACT DIFFERENCE

Live extracts are different from other concentrate products due to the elevated terpene content that these extracts tend to contain. Live extracts, on average, carry a more robust terpene concentration than traditionally cured extracts.

In addition to a more pungent aroma, higher and more complex terpene profiles can also deliver an elevated psychoactive experience because terpenes can interact with cannabinoids such as THC and CBD. All Cresco extracts are made using fresh frozen material for a superior product.

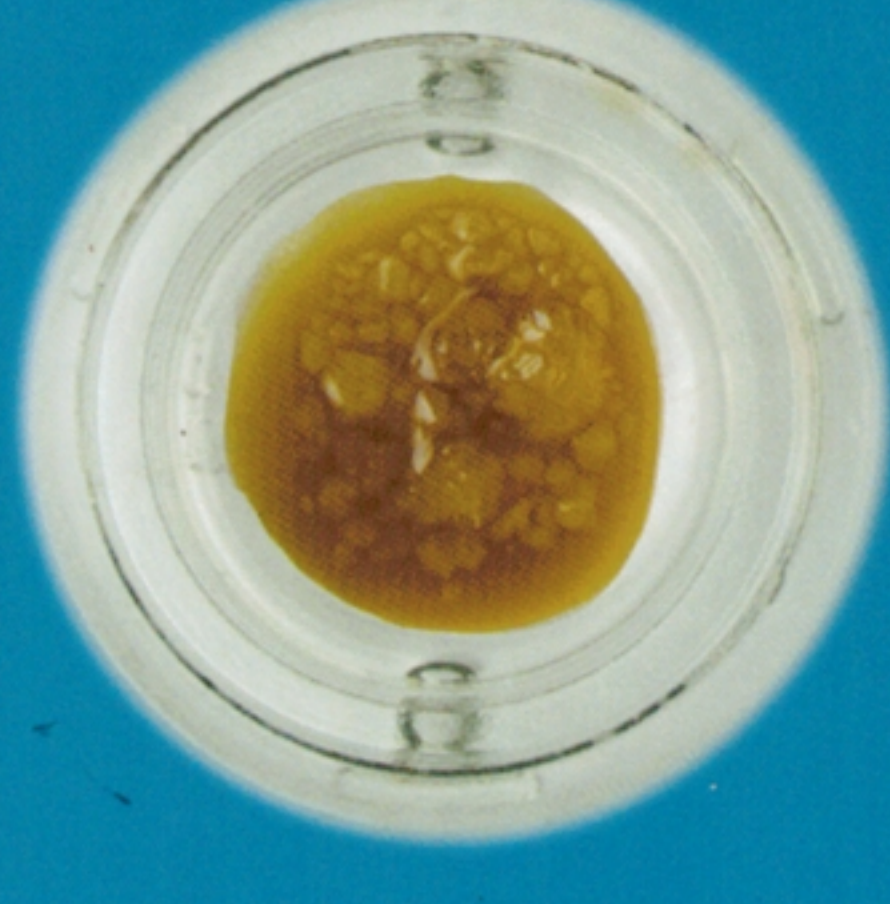

LIVE SUGAR

A shimmering crystalline concentrate made using fresh frozen material.

LIVE SAUCE

A jelly-like consistency comprised of both a syrupy liquid and granular crystals.

LIVE BUDDER

A smooth and creamy concentrate that resembles peanut butter in consistency.
