

Who we are

Capital Foam Systems is a Spray Foam and Coating Applications Company with a combined experience of over 20 plus years. We specialize in a diverse range of Spray Foam applications as well as Roof Restoration Coating Systems. Our experiences are that these products provide superior performance and longevity to help our customers reduce energy costs and increase the overall integrity of their assets.

Spray Polyurethane Foam (SPF)

Spray foam is a durable, and versatile product suitable for industrial, commercial, agricultural, and residential applications. It boasts the industry's strongest performance in energy efficiency and energy savings. This advanced system can be applied to any shape and substrate. Spray foam works by sealing the building envelope to stop conditioned air from escaping and preventing unwanted outside air from entering the structure. Similarly, when applied to a roof deck, the system stops heat transfer through the roof, minimizing conditioned air from escaping, and restricting unconditioned air from entering the building.

Roof Restorations

Restorations are an effective solution in extending the service life of a roof system. These systems apply to a diverse range of roof types including metal panel, single ply, and built-up roofs (BUR). Why replace when you can restore?

SUSTAINABILITY IN FOCUS

- An impactful amount of post-consumer recycled plastic is used in every home - Over 3,000 recycled plastic bottles!
- Be a part of reducing landfill waste with the use of SPF
- Zero ozone depletion
- By properly sealing your structure's envelope, you reduce the amount of fossil fuels needed to produce electricity, thereby reducing your carbon footprint!
