

About Approva

Approva is a cloud-based institutional resource management system (IRMS) that streamlines complex workflows across a school's administration, communications and operational processes. It features a highly customizable approval schema that lets schools maximize their operational efficiency and facilitate seamless communication between individuals and departments.

Approva helps teachers, administrators, and department heads manage complexity with ease, alleviate huge administrative workloads, and make better decisions quickly and easily.

The Approva mobile app lets teachers access information and perform administrative tasks easily on-the-move while the Web-based tool allows desk-bound staff to harness a larger screen real-estate to carry out certain administrative tasks with even greater efficiency.

Based on actual requirements gathered from schools, Approva is streamlined to work in most school environments which leads to time savings and operational efficiency for the school administration. Approva is an upgrade from the award* winning tool TeamNote for Education - built from the group up, it incorporates the features found in the predecessor and makes them better.

Approva aims to be a one-stop platform for all the school's administrative needs. Through a tight integration between software and hardware, Approva helps educational institutes coordinate their processes, services, HR resources, facilities, and communications effectively through a multi-device, single-platform user experience.

* Ministry of Education, Innergy Award 2019

Additional Notes to Designer :

- Approva is a workflow system containing modules for leave and overseas travel permission application, lesson relief planning, and timetable management.
- Approva is designed for the education market
- No more than 3 colors should be used for the logo
- May incorporate a mix of illustration and typography
- There should be at least two variations of the logo, one for website and marketing collaterals and the other as an icon for the mobile app (aspect ratio 1:1, minimum resolution of 1024 x 1024 pixels).
