

Remote Planning & Scheduling

RPS LOGO

The impact of recent events and the ever pressing need to mitigate risk and liability in their facilities has compelled owner companies to search for economic alternatives to their typical STO event execution. With KAP's Remote Planning and Scheduling service (KAP RPS) you can now confidently reduce the number of personnel in your facility, improve the overall quality of your planning effort and ensure greater predictability, all while realizing significant cost savings.

Remote Team

KAP RPS has assembled the industry's best team of planners and schedulers. Housed at our La Porte office in the southeast Houston area, we provide a productive environment far removed from the disruptions and distractions regularly experienced in the field. Your planning effort will be closely overseen by our seasoned management team, averaging over 20 years of project controls experience, over 10 of which have been with KAP.

Onsite Team

This team will gather the documentation and information needed to build the work packages, field verify critical data and review the job plans for constructibility and site interferences.

Progress Monitoring

Continuously monitor progress in real time and perform quality checks as desired by utilizing our proprietary software (or the comparable planning software of your choice). STOplanner's productivity enhancing tools enforce consistency and adherence to the planning premise while providing visibility and complete transparency into the planning effort to the STO team.

Customizable Solutions

- ✓ Onsite Team
- ✓ Planning Tools
- ✓ Timing
- ✓ Package Content and Job Plans specific to your needs

Improve Quality
