## MARINE EDUCATION

Photo by Kris Mikael Krister

### What we do

Marine 4 Life brings the wonders of the ocean to your classroom, creating an educational, interactive and fun learning experience for children of all ages.

We pride ourselves on providing a unique and immersive experience through the use of visual, auditory and tactile learning methods. All programs are curriculum aligned and are aimed to enhance and expand on classroom learning.

Following a free consultation, a customised program will be created based on age, curriculum strand and classroom type, ensuring a memorable and fun experience that will leave your students wanting more!

### Engaging Experts

Our programs are created and delivered by our passionate Marine Biologist, Chrissa Athousis. With a Bachelors degree in Marine Biology and over 10 years field experience as a dolphin and seal trainer at SeaWorld and aquarist at Underwater World, Chrissa brings to the table an ocean of knowledge... literally!

With such a vast array of experience, paired with her engaging presentation skills, Chrissa has a unique ability to bring the ocean to life in a classroom setting!

### Think Bigger!

We believe in big things at Marine 4 Life. We don't *just* follow the typical science curriculum, but we have customised class material that we can adapt to all levels (and different strands) of education as directed by **you**.

For instance, are you doing an English information report? Use an exciting topic like a marine mammal to ensure your students are engaged in what they're learning! According to a recent survey conducted on 24 students, *100% of students* retained information learnt from a Marine 4 Life program- **2 months** after the presentation! Wow!

### Reviews

*Marine 4 Life slotted into our Yr2 curriculum perfectly! Chrissa was a highly entertaining and knowledgeable speaker who was able to create a dolphin presentation to specifically meet the needs of our students and their English and Science units of work (writing an informative text and life stages of living things). Her presentation enabled our students to create detailed reports and storyboards and left them with interesting marine facts they will remember for years to come. We all look forward to seeing her again at our school next year!*
