

Project is related to the design of some web icons (generally 16x16 pixel) for a new web site, not yet in production.

Only the icon part is covered in this context; main page design and the images throughout the web pages will be requested separately in different projects (probably quoted from the same designer).

Icons used in the current (beta) design are shown in the uploaded image file with their brief explanations; most of them are add/remove type images.

For colors: Site logo consists of **Black** and 4 (four) different greens (**#B0D235** –mostly-, **#88C641**, **#5BAE46** and **#2E9343** for greens).

However, grey shades and a green gradient (from **#9FCB2C** to **#6B9913**, surely different than the ones in the logo) will be used in site design, so it may be preferable to go with **grey-green** gradient combination; but it is up to the designer.

Designs do not need be complex in detail, sleek designs are more desirable since the general layout and structure will be **clean & lean** in style.
