## Equipment Maintenance Software

Equipment. It's the backbone of your company. Whether you're pushing pipe, turning earth, or paving the way, nothing gets done without it.

So what should you rely on to maintain a fleet so critical to your operations? Definitely not a spreadsheet that simply tracks your work orders. What you need is **Equipment360**. It tells you what to do before you need to do it. It alerts you when maintenance needs to be performed, when warranties and state registrations expire, when inspections are due, and even when parts inventory is below desired stock levels.

**Equipment360** helps organize all the paperwork and information your shop receives and generates. It is flexible enough to adapt to your existing processes, and smart enough to exchange information with your other software systems.

Automate your shop and eliminate the chaos now.

## Top Features

- Simple work order entry and assignment
- Easy PM scheduling from templates and automated meter readings
- Alerts for upcoming services, inspections, and expiring skills
- Parts inventory, pricing, and installation history management
- Smart storage and quick access to shop documents
- Integration with accounting systems

## Top Benefits

- Turn your chaotic shop into an efficient operation
- Adopt a policy of "service, not repair"
- Connect your shop to the rest of your business

*"We are extremely excited to have this software...We see great potential in being able to more effectively control and track our repair and maintenance costs."*

*We also see this as a huge step in making our shop more of a cost and revenue center, rather than just a very large overhead expense."*
