

Triplebackup Live Image™ – Online Bare Metal Backup & Recovery

Triplebackup Live Image™ introduces the first Australian Internet based online image backup & recovery service. Live Image™ now enables you to securely automate offsite image backups for your clients. With super-fast bare metal recovery, you can now guarantee that you'll get them back in business within hours of a disaster.

Data loss through fire, flood, virus attacks or theft can cripple any business. A secure data protection strategy must include offsite backup. Rebuilding a client's system from file and folder backup can take days or weeks. Traditional bare metal recovery is faster and protects your operating system, installed applications and drivers, and all of your settings.

Triplebackup Live Image™ is a paradigm shift. You can provide the protection of traditional bare metal recovery, now with business critical recovery speed and a complete online (live) image of your clients' systems at all times.

Fast Facts

- ✓ Internet based online bare metal backup
- ✓ Initial seeding upload via couriered hard drive
- ✓ Automated nightly block-based backup of changes over the internet (typically less than 0.3% of base image)
- ✓ Fully automated consolidation of base & incremental images
- ✓ Each day's complete image is recoverable at any time
- ✓ VHD format image - 10 minute boot to get back to work
- ✓ Conversion to VMDK easy & free
- ✓ Rapid recovery to dissimilar hardware, to & from virtual platforms, and to computers with no functioning OS
- ✓ Automatic backup of SQL, Exchange & critical applications
- ✓ Files and folders also recoverable
- ✓ Automatic backups with flexible scheduling
- ✓ Stored on Triplebackup's servers in a bank-grade Australian data centre:
 - ✓ No outlay on servers
 - ✓ No extra bandwidth required to your office
- ✓ Stored on 3 servers for enterprise-level protection

Why Resell Live Image™?

- ✓ Automated offsite image backups for your clients
- ✓ Generous monthly revenue share
- ✓ All backups are fully automated - support more clients, effortlessly
- ✓ No outlay on servers or bandwidth for Resellers
- ✓ Manage all clients from one Web-based dashboard
- ✓ No manual consolidation or scheduling required
- ✓ Re-branding available
- ✓ Earn your clients' loyalty with speedy recovery in their time of crisis
- ✓ Profitably service more clients and reach new market segments

How Does Live Image™ Work?

Changes are typically less than < 0.3% of the base image - The initial image backup is made to a hard drive which is then plugged into Triplebackup's servers for upload. Subsequent uploads are block-level changes, sent nightly over the Internet. Only a small window is required for the nightly upload. Images are taken at the volume level and stored in VHD format.

Enterprise level protection - The images are sent to Triplebackup's bank-grade data centre and stored on 3 servers at all times. No need to buy servers and no bandwidth expense. Only the changes need to be sent over the Internet, so there is no need to schedule a recurring full backup and clients' bandwidth expense is reduced.

Complete daily image is available for bare metal recovery at all times - Once on the servers, the images and daily changes are automatically consolidated. Unlike other bare metal offerings, there is no manual consolidation, which saves you valuable time.

Live Image™ is affordable – it stores just the base image and all incremental uploads, reducing your cost.

Speeds up bare metal recovery

Every day's consolidated image is immediately available - No time is wasted consolidating the image prior to recovery, saving hours on recovery.

Rebuild even if there is no operating system - Live Image™ enables you to quickly rebuild your clients' server. SQL Server, Exchange and all critical applications, plus files and folders are protected and recoverable. You can rapidly recover to dissimilar hardware, and to and from virtual platforms.

Reduces the risk of image corruption - Live Image™ eliminates the need for manual consolidation, which greatly reduces the risk of image corruption. Images are cryptographically verified to guarantee their correctness.

Monitor effortlessly from anywhere

Web-based Dashboard - monitor and manage all of your clients' image backups from a single web-based dashboard, anywhere, anytime. Initiate the recovery download remotely over the Internet via your Dashboard. Save valuable time on recovery.

Receive a daily email with the backup status of all clients, plus email notification when any client's backup fails.

A Complete Backup Suite

Coupled with Triplebackup's Local Image Backup and Online File & Folder Backup, Live Image™ enables you to offer your clients a complete data protection service.

Live Image™ is different to other Bare Metal recovery

- ✓ Base and incremental images are automatically consolidated daily
- ✓ The consolidated daily image is stored online at all times
- ✓ Only pay for storage of base image plus incremental changes
- ✓ The daily consolidated image from the past 30 days is stored for free
- ✓ Web-based dashboard to monitor clients' backups
- ✓ Granular file & folder recovery available
- ✓ 10 minute boot to get back to work with VHD format
- ✓ With Live Image™, your clients never need to manually take their backup offsite again!

System Requirements

Operates on: Windows Server® 2003 R2 / SP1, Windows Server® 2008 and 2008 R2, Windows® Small Business Server 2003 R2, 2008 and 2011. Supports: Microsoft® Exchange® and SQL Server®.
