Standing out as one of the premier Petroleum and Mechanical Piping Contractors, W.A. Rasic Construction Co. has the ability to overcome all geological, logistical, and engineering intricacies, while using ingenuity and innovation to find new and more efficient ways to deliver projects to our clients.

W.A. RASIC CONSTRUCTION Co.

Our Corporate Headquarters in Long Beach, California is situated at one of the major hubs for the petroleum products and natural gas markets. Our five-acre Operations Headquarters, located in Bell Gardens, California and our five-acre Perris, California facility serve as primary staging locations for the company's equipment fleet. These two operational platforms allow W.A. Rasic Construction to house and maintain a large fleet of equipment ranging from Super-10 Dumps, Heavy Trucks, Side Booms, Trailers, and Backhoes to Graders, Hydraulic Breakers, Loaders, and Excavators that range in size from 7,500 lbs to over 200,000 lbs. It is not unusual, however, for W.A. Rasic Construction to position office facilities and equipment yards in the remote reaches of the country in order to better serve our customer's needs.

Safety is of the utmost importance and this culture is translated to our crews daily, with a rigorous OQ and monitoring program to ensure spreads have the most experience, safety conscious and productive resources to ensure a quality product to our customers. W.A. Rasic requires that its employees fulfill Performance Verifications and Safety Qualifications. Our full time in-house Safety Department allows employees to remain apprised of all Regulatory changes in the Industry.
