

## SCHOOL OF MEDIA AND COMMUNICATION

Committed, artistic, visionary—these are a few of the words used to describe people drawn to careers in interactive arts, digital journalism, strategic communications, digital cinema, and screenwriting. Motivations may vary, but passion for the craft is the unifying factor that binds those in the creative, media, and communications community.

You are a modern-day storyteller. Whether you choose to tell stories traditionally through print or through more contemporary media like digital cinema, National University's School of Media and Communication can help you reach your goals. Based in San Diego, with a large presence in Los Angeles and San Jose, the School offers convenient access to professional instruction and hands-on learning. You'll use the latest technologies that mirror today's workplace, giving you hands-on experience. Each program also focuses on team building, collaboration, and project management skills to further equip you for the work setting.

## COLLEGE OF LETTERS AND SCIENCES

National University's College of Letters and Sciences provides students with programs that are both professionally valuable and academically challenging. You can choose from degree programs in liberal arts fields—such as arts and humanities, social sciences, and professional studies—and the sciences, such as natural science, mathematics, and criminal justice.

Liberal arts programs prepare students to enter and move ahead in many different careers by developing a student's analytical, critical thinking, and writing proficiencies. Skills highly sought after by employers—communication, creativity, analytical thinking, diplomacy, problem solving, leadership, team building, and appreciation of cultural diversity—are covered in the variety of degree programs offered by the College.

Students who study lab-intensive science programs take the first step to a lifelong career in discovery. According to the Bureau of Labor Statistics, careers for biologists, researchers, conservation scientists, and foresters continue to grow for all occupations through 2016. These programs put students on the path to becoming life science and earth science teachers as well. National University's bachelor-level science programs also prepare students to enter specialized graduate programs.
