

Updated Brief

I was considering a scene (triptych) plus the gate - focussed around native parrots?

As the fence toppers are rather restrictive size wise I know the scene will be limited, but maybe the detail in the image can be heightened

The 3 Fence Toppers

I found the following image - it would be nice to have 3 similar panels - but NOT the exact same image...

or a full scene across the panels and gate...

Panel 1 - birds flying

Panel 2 - close up of a couple of parrots about to land on a branch

Panel 3 - parrots on the branch

Gate: the continuation of the branch from panel 3 and remainder of the tree with a couple of parrots in it

2. **Panel 5** Concept for the "large screen" at front of house between blade and house
"tree of life"
