

COMPANY

INTRODUCTION

About us

With roots in the US Road Transportation Industry, D&D has evolved over the last 25 years from being a regional road transportation company to a global provider of leading, innovative, and fully integrated supply chain logistics and management.

Founded in Meridian, MS in 1987, D&D began its business in the road transportation industry. With a fleet of over 30 trucks servicing the greater American South East, D&D has expanded its base over the years to evolve into a provider of International Road, Rail, Sea and Air transportation.

The rapid development of global trade over the last decade has also seen D&D specialize in 3PL and 4PL management of warehousing and distribution, customs brokerage, and industry specific supply chain consulting. Today D&D has offices in the Greater United States and Asia Pacific region as well as a worldwide network of trusted partners that ensure we are globally present to serve our clients requirements.

Mission statement:

"Customer focus, innovation, and operational excellence are the driving forces behind our aim to provide fully integrated logistics solutions. Dedication, quality of service, and the expertise of our personnel are the asset base we draw upon to strive to be not just a partner, but an extension of our clients' business"

Freight & Transportation

Sea Freight:

Equipped to handle Port-to-Port or Multimodal shipments to all regions across the globe, D&D is your one stop shop for any and all of your sea freight needs! As a licensed NVOCC, we take pride in the responsibility you place in our hands to handle your shipments with the utmost of diligence and efficiency. Whether you're in need of shipping Containerized, LCL, or Project cargo, look no further than D&D to do justice to your shipping requirements

Air Freight:

With strong tie ups to major air carriers, and a trusted network of partners at most global airports, we're confident in our ability to deliver on your time sensitive shipments.

Land Transport:

With over 25 years of experience in the trucking business and a fleet that's grown organically from 4 trucks in 1987, to over 30 trucks in 2013, we're proud of the inroads we have made in the trucking sector. We're equipped to truck anywhere in the 48 contiguous states of the USA and if you need trucking outside the US - we've got long-standing partners in most of continental Europe as well as infrastructure in China that helps ensure we're present globally to cover your land transportation requirements.

Warehousing & Distribution

Distribution Hubs:

Fully racked and equipped with a multi-purpose warehouse management system - we're positive our sites have the tools to make your distribution cycle run like clockwork!

We offer a full suite of on-site logistics such as kitting, bundling, re-packing and pick/pack, and if you're needing to store temperature sensitive cargo, our cold storage locations allow you to make sure your product is sitting in the climate you intended for it!

CFS Consolidations:

Several importers utilize CFS (container freight station) facilities to bundle the products they've bought across multiple suppliers into consolidated containers.

The CFS option serves as a cost effective alternative to shipping LCL (less-than-container) loads by saving on freight and economizing on transit time.

D&D has dedicated CFS stations at most major Asian origins (China, Taiwan, Vietnam, Indonesia & Thailand) so as to ensure that your products are bundled and routed on to your desired destination safely and timely.

Fulfillment & Retail

Our fully integrated order processing and fulfillment system allows us to act as your virtual office, so that you don't need one!

Ideal for online sellers or businesses that need a presence in foreign regions, the fulfillment system serves as a web based B2B or B2C communication tool that's easy and convenient to use while still granting you the ability to establish the checks and balances you need that ensure robustness and security to your operations.

The system is also set up to provide you with reports related to your sales orders and invoices on the back-end, while simultaneously allowing your clients to order what's in stock or soon available for dispatch on the front end, thereby allowing for the seamless integration of your supply chain right from procurement thru delivery!
